

In Windows 10 1607 and above the TPM Password Hash is no longer accessible from within windows. This is a design change to increase the Security in windows 10 which you can read more about here: <https://technet.microsoft.com/en-us/itpro/windows/keep-secure/change-the-tpm-owner-password>

We have written a couple of scripts that resolves the situation when using MBAM. The scripts as well as background and usage are described in a blog post by Jörgen Nilsson @ccmexec

Please check out: <http://ccmexec.com/2016/11/mbam-tpm-password-hash-and-windows-10-1607> for details.

Update: This method has been confirmed to work also with ConfigMgr integrated MBAM/BitLocker management.
